isaacjohnson.dev

OVERVIEW

I taught myself Javascript fundamentals over the course of 4 months, after which, I spent my time learning and understanding how the React library, and specifically Next.js work. I am motivated and results oriented. I love seeing the finished product, and find that the process of getting to that point is a high energy puzzle that needs to be solved.

PROJECTS

isaacjohnson.dev — Portfolio

<https://github.com/FindingHomeHere/portfolio-v2>

Isaacjohnson.dev is a portfolio app built using Next.js as a base, user interface components were built with Chakra Ui and styled with Emotion. This site was self-designed, and is fully responsive. It uses system color mode to switch between light and dark mode automatically, cookies persist the color mode between multiple sessions, and the user can switch the mode manually.

The Global Citizen — Photography Portfolio

https://github.com/FindingHomeHere/the_global_citizen

The Global Citizen is a photography portfolio built for a local photographer who values simplicity. I built it with Next.js, Chakra Ui, and Emotion for the styles. He wanted the Photos to speak for themselves, so it is very minimal. For this website I built a simple, modular photo modal that is mobile responsive, and very user-friendly.

Natours — Travel Booking App

<https://github.com/FindingHomeHere/Natours>

Natours is a full stack app built with Node js, MongoDB (mongoose), Express, Pug, CSS, Axios, Json Web Token, Multer, Sharp, payments taken through Stripe, users can browse and book tours, create accounts, review their tours,

SKILLS

HTML, CSS, Javascript (ES6+)

React Js, React Native

Next.js

Emotion/Styled components

Chakra Ui

Node.js

Express

MongoDB, Mongoose

UX/UI implementation
